Clownfishes A Guide To Their

Clownfish or anemonefish are fishes from the subfamily Amphiprioninae in the family Pomacentridae. Thirty species are recognized: one in the genus *Premnas*, while the remaining are in the genus *Amphiprion*. In the wild, they all form symbiotic mutualisms with sea anemones. Depending on species, anemonefish are overall yellow, orange, or a reddish or blackish color, and many show white bars or patches.

Amphiprioninae - Wikipedia

A popular example of mutualism in the ocean is the relationship between sea anemones and clownfishes. Also known

The queen angelfish is without a doubt the most beautiful of the angelfish species. Young queens resemble a juvenile blue angelfish. But as they grow, they acquire their spectacular blue and yellow markings, with rainbow colors on the edges of their fins. The queen angelfish is found throughout the western Atlantic.

Les poissons-clowns, ou Amphiprioninae, sont une sous-famille de poissons appartenant à la famille des pomacentridés. Elle contient trente espèces, une seule classée dans le genre *Premnas*, les autres faisant partie du genre *Amphiprion*. Ce sont des poissons d'une dizaine de centimètres dans les tons d'orange et de noir. Certaines espèces présentent des bandes ou des barres blanches.
