Fall | Graduate | 12 Units | Prereq: 2.002. Applies solid mechanics fundamentals to the analysis of marine, civil, and mechanical structures. Continuum concepts of stress, deformation, constitutive response and boundary conditions are reviewed in selected examples. The principle of virtual work guides mechanics modeling of slender structural components (e.g., beams; shafts; cables, frames; plates; shells), leading to appropriate simplifying assumptions.

Structural Mechanics 2.080 Lecture 12 Semester Yr The coefficient 0.5 can be interpreted as the Poisson ratio $\nu = \frac{\epsilon_{22}}{\epsilon_{11}} = \frac{\epsilon_{33}}{\epsilon_{11}} = 0.5$ (12.15) We can conclude that plastic incompressibility requires that the Poisson ratio be equal to $\nu = 0.5$, which is different from the elastic Poisson ratio, equal to $\nu = 0.3$ for metals. Many other
