On spin-echo (SE) imaging, the repetition time (TR) and the echo time (TE) are used to control image contrast and the "weighting" of the MR image. There are many misconceptions about what the term "weighting" actually means, so a separate Q&A is devoted to that very subject. For now we will not specifically define what we mean by "T1-weighting",

Image contrast - Questions and Answers in MRI

The term e^{-bD} thus behaves very much like the T2-weighting term $e^{-TE/T2}$ found in many other pulse sequences. The value of b is selected by the operator prior to imaging. This choice controls the degree of observed diffusion-
