Mack Trucks began producing the Maxidyne diesel engine and the Maxitorque transmission in 1966 to meet the demands of modern long-haul driving and to provide a more economical performance. Mack was struggling in 1966 and had severe cash-flow problems, but the truck maker decided to gamble on the Maxidyne as a means to compete against Cummins, which was the leading supplier of diesel engines to big-rig truck builders.

Mack of Allentown, Pennsylvania, manufactured a wide range of medium-size heavy-duty trucks throughout the 1920s. In 1927, it launched the BJ line of three- and four-ton trucks, powered by a 126-horsepower, six-cylinder gasoline engine. It also featured front wheel brakes in an era in which vehicles only had rear wheel brakes.
